

I would reject claim 54 under 35 USC 112, 2nd  
also. The Markush groups in the claim recites  
"the tropism determining part of the fiber protein is  
selected from" a group of adenovirus serotypes.  
It should be selected from fiber proteins of the  
listed Ad serotypes.

Redrafting the claim to recite: "... is selected from  
the fiber proteins from adenoviruses of the group  
consisting of ... "

Dave
